Experiment-05

Online Flight Reservation System

Aim

To design and develop an Online Flight Reservation System that allows users to search flights, check seat availability, book tickets, make payments, view booking status, print tickets, and cancel reservations. The admin can manage flight schedules, fares, seat availability, and customer details.

HTML CODE

```
<!DOCTYPE html>
<html>
<head>
   <title>Online Flight Reservation System</title>
   <style>
      body {
         font-family: Arial;
         background-color: lightblue;
         text-align: center;
      }
      .container {
         background: white;
         width: 350px;
         margin: 30px auto;
         padding: 20px;
         border-radius: 10px;
      }
```

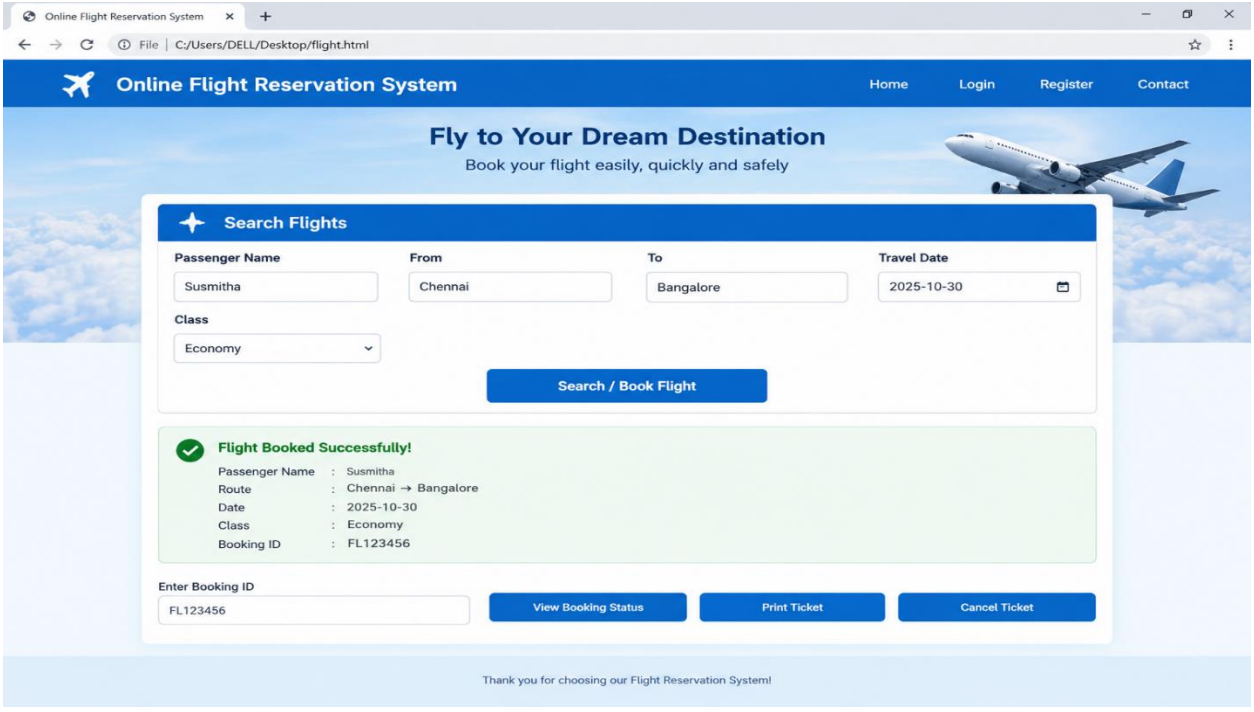

```
        input, select, button {
            width: 90%;
            padding: 10px;
            margin: 8px;
        }
        button {
            background: blue;
            color: white;
            border: none;
            cursor: pointer;
        }
    </style>
</head>
<body>
<h1>Online Flight Reservation System</h1>
<div class="container">
    <h2>Search Flights</h2>
    <input type="text" id="name" placeholder="Passenger Name">
    <input type="text" id="from" placeholder="From">
    <input type="text" id="to" placeholder="Destination">
    <input type="date" id="date">
    <select id="class">
        <option value="">Select Class</option>
        <option>Economy</option>
```

```
        <option>Business</option>
        <option>First Class</option>
    </select>
    <button onclick="bookFlight()">Search / Book Flight</button>
    <h3 id="result"></h3>
    <input type="text" id="pnr" placeholder="Enter Booking ID">
    <button onclick="checkStatus()">View Booking Status</button>
    <button onclick="printTicket()">Print Ticket</button>
    <button onclick="cancelTicket()">Cancel Ticket</button>
</div>
<script>
let bookingID = "";
function bookFlight() {
    let name = document.getElementById("name").value;
    let from = document.getElementById("from").value;
    let to = document.getElementById("to").value;
    let date = document.getElementById("date").value;
    let cls = document.getElementById("class").value;
    if (!name || !from || !to || !date || !cls) {
        alert("Please fill all details");
        return;
    }
    bookingID = Math.floor(100000 + Math.random() * 900000);
    document.getElementById("result").innerHTML =
```

```
        "Flight Booked Successfully!<br>" +
        "Passenger: " + name +
        "<br>Route: " + from + " to " + to +
        "<br>Date: " + date +
        "<br>Class: " + cls +
        "<br>Booking ID: " + bookingID;
}
function checkStatus() {
    let id = document.getElementById("pnr").value;
    if (id == "") {
        alert("Enter Booking ID");
    } else if (id == bookingID) {
        alert("Booking Status: Confirmed");
    } else {
        alert("Booking not found");
    }
}
function printTicket() {
    if (bookingID == "") {
        alert("Please book a flight first");
    } else {
        window.print();
    }
}
```

```
function cancelTicket() {
    if (bookingID == "") {
        alert("No booking available");
    } else {
        alert("Ticket cancelled successfully");
        bookingID = "";
        document.getElementById("result").innerHTML =
            "Booking Cancelled";
    }
}
</script>
</body>
</html>
```

Output Screenshot

Result

Thus, the Online Flight Reservation System was successfully designed using HTML, CSS, and JavaScript. It allows users to enter passenger details, search and book flights, generate booking IDs, check booking status, print tickets, and cancel tickets.
