Experiment-06

Online Cake Ordering System

Aim

To design and develop an Online Cake Ordering System that allows students/users to register, log in, search cakes, filter by category and price, view cake details, add cakes to cart, place orders, enter shipping addresses, and track order status. The admin can manage cake products, upload images, manage orders, and update shipping status.

HTML CODE

```
<!DOCTYPE html>

<html>

<head>

   <title>Online Cake Ordering System</title>

   <style>

      body {

         font-family: Arial;

         background-color: #fff0f5;

         text-align: center;

      }

      h1 {

         color: #d63384;

      }

      .container {

         background: white;
```

```
    width: 350px;
    margin: 25px auto;
    padding: 20px;
    border-radius: 10px;
    box-shadow: 0 0 10px pink;
}
input, select, button {
    width: 90%;
    padding: 10px;
    margin: 8px;
}
button {
    background: #d63384;
    color: white;
    border: none;
    cursor: pointer;
    border-radius: 5px;
}
.cake {
    display: inline-block;
    background: white;
    width: 200px;
    padding: 15px;
    margin: 10px;
```

```
            border-radius: 10px;
        }
        .cake img {
            width: 180px;
            height: 130px;
            object-fit: cover;
        }
    </style>
</head>
<body>
<h1>Online Cake Ordering System</h1>

</html>
```

Output Screenshot

Result

Thus, the Online Cake Ordering System was successfully designed using HTML, CSS, and JavaScript. Users can register, log in, search and filter cakes, view cake details, add products to the cart, place orders, and enter shipping addresses. Admins can update order and delivery status.
